Dear Chairman Scott, Ranking Member Foxx, Chairman Alexander, and Ranking Member Murray:

This letter is submitted on behalf of these 24 undersigned members and partners of the Postsecondary Data Collaborative (PostsecData). PostsecData is comprised of organizations committed to the use of high-quality postsecondary data to improve student success and advance educational equity.

PostsecData recognizes the unprecedented challenges facing our nation’s students and our higher education system as a result of the coronavirus disease 2019 (COVID-19) public health crisis. While the full impact on postsecondary education is still unknown, we do know that colleges and universities have closed campus doors, program instruction has shifted to online modalities, and students have faced enormous and unforeseen challenges to completing the Spring semester and continuing on their path to a degree or credential. As Congress considers additional measures to address the effects of COVID-19 on higher education, policymakers must have timely data to answer questions about how the broad and sudden shift to distance education has impacted college access, persistence, and success.

In this time of crisis and eventual recovery, the overall importance of accurate, timely data cannot be understated—it will serve an essential resource for lawmakers to craft evidence-based policies to support students through the public health crisis and beyond. At minimum, policymakers need timely information on how the initial shift to online learning and eventual shift back to campus-based or hybrid instruction will affect postsecondary students’ enrollment status and progression.

We ask Congress to utilize our existing postsecondary data infrastructure to answer these important questions by adding new fields to the National Student Loan Data System (NSLDS) using definitions from the Integrated Postsecondary Education Data System (IPEDS). By adding elements to NSLDS needed to denote if students were enrolled in distance education before March 2020 and how students move into and out of distance education moving forward, we can provide policymakers with timely, responsive data.
to inform future investments and better target interventions. This approach would minimize additional burdens for institutions, who are already required to report the number of students who are enrolled exclusively in distance education, partially in distance education, or not in distance education annually to IPEDS, and already report information on enrollment, persistence, and completion to NSLDS.

Congress should also require the Department of Education (ED) to use these data to publicly report summary statistics on metrics including enrollment, Pell Grant and loan receipt, and withdrawals by distance status to inform responsive policymaking.

While this distance education data would be limited to students who receive Title IV funding due to the lack of a more comprehensive postsecondary data network, it would provide policymakers with a much clearer picture of the public health crisis’ impact on students and help identify opportunities to support them in the semesters and years to come.

If you have any questions about this request, please contact Mamie Voight, vice president of policy research at the Institute for Higher Education Policy (mvoight@ihep.org or 202-587-4967).

Sincerely,

AccuRounds
